TESTIMONIAL

Westcliffe Joiners are without doubt one of the very best people to go to if one is seeking creative solutions to the design, manufacture, and installation of specialised timber staircases.
They have over the years brought creative practical solutions to our almost impossible carpentry problems and requirements.

The first problem they solved was designing and installing a curved staircase that many other previously contacted companies walked away from, saying it could not be achieved in such a small space.

Westcliffe produced a beautiful and clever solution.
Since then, Westcliffe have achieved similar triumphs of woodworking ingenuity,
including making sets of large, glazed period style double opening doors to rooms in keeping with our 18th Century house.

More than that, they undertook an extremely difficult project to take out the existing glass from six fine fenestrated multi paned, floor to ceiling widows, plus doors.
All were then re-fitted with Heritage Double Glazed panes.
What made this such an achievement was the fact that all 192 panes were fractionally different in size!
A template had to be made for each.

Westcliffe's work is beyond reproach from start to finish.
Its skilled installers and craftsmen are organised, and prepared, clean, tidy, work with little fuss and cause minimal disruption.
They complete the job within the time scale and as per quote.

If you want the best, and can afford it, then we recommend Westcliffe as your first port of call.

As the Founders of a Nationally recognised Engineering Company, we also understand, appreciate and demand first rate service and product quality in others.

Westcliffe will provide it.
